Abstract
The Effect of Cooperative Learning Method on the development level of
Swimming Skills of students in the Sport Science college at Mu'tah
University

Nezar Maher Alsaraireh

Mu'tah University, 2013

The study aimed at investigating the effect of cooperative learning Method on the development level of Swimming Skills of students in the Sport Science college at Mu'tah University. The researcher used an experimental design to achieve the purpose of the study. The number of students participated in the study was 30 students and they were randomly distributed into two equal groups, the experimental group which was taught by using the cooperative teaching Method and the control group which was taught by using the traditional Method. The results of the study indicated that using the cooperative Method had significant positive effect on learning the swimming skills used in this study. Regarding the comparison between the two groups, the results showed that the experimental group which was taught using the cooperative teaching Method was significantly better than the control group which was taught using the traditional Method. According to the results of the study, the researcher recommended using the cooperative learning Method in teaching the basic swimming skills for its positive effect in enhancing the learning of these skills.
